

Whereas, it is the intention of OI DF to make its Specifications broadly available is evidenced throughout the OI DF documentation, including:

Section 1 of the OI DF Contribution Agreement which provides that “OI DF intends to make Specifications (defined in the OpenID Intellectual Property Rights Policy) broadly available for implementation by others without a fee. . .”

And the “Intellectual Property and Contribution Agreements” tab on the OI DF website, in which the following statement is made:

One of the jobs of the OpenID Foundation is to ensure that OpenID specifications are freely implementable. As Brad Fitzpatrick (the father of OpenID) said, *“Nobody should own this. Nobody’s planning on making any money from this. The goal is to release every part of this under the most liberal licenses possible, so there’s no money or licensing or registering required to play. It benefits the community as a whole if something like this exists, and we’re all a part of the community.”*

And the OI DF local chapter policy, which provides that:

Chapters must agree that any intellectual property or trademarks developed or held by the Chapter must be freely available for use to the OpenID Community. . .

And Whereas, OI DF has received comments from developers, implementers and others suggesting that it would be helpful to make the OI DF licensing provision more explicit, providing OI DF with the opportunity to set forth a more affirmative expression of its intention to make its specification broadly available for reference and use by the developer and implementer community.

Therefore, it is resolved, that the following statement be appended to each OI DF Implementers Draft and Final Specification:

OI DF grants to any Contributor, developer, implementer, or other interested party a non-exclusive, royalty free, worldwide copyright license to reproduce, prepare derivative works from, distribute, perform and display, this Implementers Draft or Final Specification solely for the purposes of (i) developing specifications, and (ii) implementing Implementers Drafts and Final Specifications based on such documents, provided that attribution be made to OI DF as the source of the material, but that such attribution does not indicate the endorsement by OI DF.
