

OpenID Connect Federation

Roland Hedberg, 21 May 2020

Specification for how to build multi-lateral federations using OpenID Connect.

Main ingredients

- Based on a trusted 3rd party
- Dynamic provider information discovery and client registration
- Uses signed entity statements
- Trust chains
- Trusted Metadata that can be verified to adhere to company/organisation/federation policies.
- Possibility to use Trust Marks.
- Adding/removing entities in a distributed maner.

Where are we ?

- We're on version 12 of the specification.
- Last major change is on how client authentication in connection with automatic registration is to be accomplished.
- There are 3 independent implementations.
- We're going to perform a first interoperability testing at the beginning on June.
